Challenge-4

Merkayla Wong

6-9-2023

Questions

Load the “CommQuest2023.csv” dataset using the `read_csv()` command and assign it to a variable named “comm_data.”

```
# Enter code here
library(tidyverse)
```

```
## ── Attaching core tidyverse packages ──────────────────────── tidyverse 2.0.0 ──
## ✓ dplyr     1.1.2     ✓ readr     2.1.4
## ✓ forcats   1.0.0     ✓ stringr   1.5.0
## ✓ ggplot2   3.4.3     ✓ tibble    3.2.1
## ✓ lubridate 1.9.2     ✓ tidyr     1.3.0
## ✓ purrr     1.0.2
## ── Conflicts ────────────────────────────────────────── tidyverse_conflicts() ──
## ✖ dplyr::filter() masks stats::filter()
## ✖ dplyr::lag()    masks stats::lag()
## ℹ Use the conflicted package (<http://conflicted.r-lib.org/>) to force all conflicts to be
come errors
```

```
# Read data from the csv file
comm_data. <- read_csv("CommQuest2023_Larger.csv")
```

```
## Rows: 1000 Columns: 5
## ── Column specification ────────────────────────────────────────────────────────
## Delimiter: ","
## chr  (3): channel, sender, message
## dbl  (1): sentiment
## date (1): date
##
## ℹ Use `spec()` to retrieve the full column specification for this data.
## ℹ Specify the column types or set `show_col_types = FALSE` to quiet this message.
```

Question-1: Communication Chronicles

Using the select command, create a new dataframe containing only the “date,” “channel,” and “message” columns from the “comm_data” dataset.

Solution:

```
# Enter code here
select(comm_data., date,channel,message)
```

```
## # A tibble: 1,000 × 3
##    date       channel message
##    <date>     <chr>   <chr>
##  1 2023-08-11 Twitter Fun weekend!
##  2 2023-08-11 Email   Hello everyone!
##  3 2023-08-11 Slack   Hello everyone!
##  4 2023-08-18 Email   Fun weekend!
##  5 2023-08-14 Slack   Need assistance
##  6 2023-08-04 Email   Need assistance
##  7 2023-08-10 Twitter Hello everyone!
##  8 2023-08-04 Slack   Hello everyone!
##  9 2023-08-20 Email   Team meeting
## 10 2023-08-09 Slack   Hello everyone!
## # ℹ 990 more rows
```

Question-2: Channel Selection

Use the filter command to create a new dataframe that includes messages sent through the “Twitter” channel on August 2nd.

Solution:

```
# Enter code here
comm_data. %>%
  filter(channel == "Twitter", date == "2023-08-02")
```

```
## # A tibble: 15 × 5
##    date       channel sender        message         sentiment
##    <date>     <chr>   <chr>         <chr>               <dbl>
##  1 2023-08-02 Twitter alice@example Team meeting        0.210
##  2 2023-08-02 Twitter @erin_tweets  Exciting news!      0.750
##  3 2023-08-02 Twitter dave@example  Exciting news!      0.817
##  4 2023-08-02 Twitter @erin_tweets  Exciting news!      0.582
##  5 2023-08-02 Twitter @erin_tweets  Exciting news!     -0.525
##  6 2023-08-02 Twitter alice@example Team meeting        0.965
##  7 2023-08-02 Twitter dave@example  Great work!         0.516
##  8 2023-08-02 Twitter carol_slack   Hello everyone!     0.451
##  9 2023-08-02 Twitter carol_slack   Hello everyone!     0.174
## 10 2023-08-02 Twitter carol_slack   Need assistance     0.216
## 11 2023-08-02 Twitter @frank_chat   Need assistance    -0.115
## 12 2023-08-02 Twitter alice@example Need assistance     0.158
## 13 2023-08-02 Twitter carol_slack   Exciting news!     -0.693
## 14 2023-08-02 Twitter @bob_tweets   Need assistance    -0.282
## 15 2023-08-02 Twitter @erin_tweets  Need assistance     0.821
```

Question-3: Chronological Order

Utilizing the arrange command, arrange the “comm_data” dataframe in ascending order based on the “date” column.

Solution:

```
# Enter code here
arrange(comm_data. ,date)
```

```
## # A tibble: 1,000 × 5
##    date       channel sender        message         sentiment
##    <date>     <chr>   <chr>         <chr>               <dbl>
##  1 2023-08-01 Twitter alice@example Need assistance     0.677
##  2 2023-08-01 Twitter @bob_tweets   Need assistance     0.148
##  3 2023-08-01 Twitter @frank_chat   Need assistance     0.599
##  4 2023-08-01 Twitter @frank_chat   Exciting news!     -0.823
##  5 2023-08-01 Slack   @frank_chat   Team meeting       -0.202
##  6 2023-08-01 Slack   @bob_tweets   Exciting news!      0.146
##  7 2023-08-01 Slack   @erin_tweets  Great work!         0.244
##  8 2023-08-01 Twitter @frank_chat   Team meeting       -0.526
##  9 2023-08-01 Twitter @frank_chat   Exciting news!     -0.399
## 10 2023-08-01 Slack   @frank_chat   Need assistance     0.602
## # ℹ 990 more rows
```

Question-4: Distinct Discovery

Apply the distinct command to find the unique senders in the “comm_data” dataframe.

Solution:

```
# Enter code here
comm_data. %>% distinct(sender)
```

```
## # A tibble: 6 × 1
##   sender
##   <chr>
## 1 dave@example
## 2 @bob_tweets
## 3 @frank_chat
## 4 @erin_tweets
## 5 alice@example
## 6 carol_slack
```

Question-5: Sender Stats

Employ the count and group_by commands to generate a summary table that shows the count of messages sent by each sender in the “comm_data” dataframe.

Solution:

```
# Enter code here
comm_data. %>%
  group_by(sender) %>%
    summarise(count = n())
```

```
## # A tibble: 6 × 2
##   sender        count
##   <chr>         <int>
## 1 @bob_tweets     179
## 2 @erin_tweets    171
## 3 @frank_chat     174
## 4 alice@example   180
## 5 carol_slack     141
## 6 dave@example    155
```

Question-6: Channel Chatter Insights

Using the group_by and count commands, create a summary table that displays the count of messages sent through each communication channel in the “comm_data” dataframe.

Solution:

```
# Enter code here
comm_data. %>%
  group_by(channel) %>%
    summarise(count = n())
```

```
## # A tibble: 3 × 2
##   channel count
##   <chr>   <int>
## 1 Email     331
## 2 Slack     320
## 3 Twitter   349
```

Question-7: Positive Pioneers

Utilize the filter, select, and arrange commands to identify the top three senders with the highest average positive sentiment scores. Display their usernames and corresponding sentiment averages.

comm_data.%>% filter(sentiment>0) %>% group_by(sender)%>% summarise(sender, mean_sentiment = mean(sentiment))%>% distinct(sender, mean_sentiment) %>% slice_max((mean_sentiment), n = 3) **Solution:**

```
# Enter code here
comm_data.%>%
  filter(sentiment>0) %>%
    group_by(sender)%>%
      summarise(sender, mean_sentiment = mean(sentiment))%>%
          distinct(sender, mean_sentiment) %>%
            arrange(desc(mean_sentiment)) %>%
  ungroup() %>%
  slice(1:3)
```

```
## Warning: Returning more (or less) than 1 row per `summarise()` group was deprecated in
## dplyr 1.1.0.
## ℹ Please use `reframe()` instead.
## ℹ When switching from `summarise()` to `reframe()`, remember that `reframe()`
##   always returns an ungrouped data frame and adjust accordingly.
## Call `lifecycle::last_lifecycle_warnings()` to see where this warning was
## generated.
```

```
## `summarise()` has grouped output by 'sender'. You can override using the
## `.groups` argument.
```

```
## # A tibble: 3 × 2
##   sender        mean_sentiment
##   <chr>                  <dbl>
## 1 dave@example           0.541
## 2 @frank_chat            0.528
## 3 alice@example          0.493
```

Question-8: Message Mood Over Time

With the group_by, summarise, and arrange commands, calculate the average sentiment score for each day in the “comm_data” dataframe.

Solution:

```
# Enter code here
comm_data. %>%
    group_by(date)%>%
      summarise(date, mean_sentiment = mean(sentiment))%>%
        distinct(date, mean_sentiment)
```

```
## Warning: Returning more (or less) than 1 row per `summarise()` group was deprecated in
## dplyr 1.1.0.
## ℹ Please use `reframe()` instead.
## ℹ When switching from `summarise()` to `reframe()`, remember that `reframe()`
##   always returns an ungrouped data frame and adjust accordingly.
## Call `lifecycle::last_lifecycle_warnings()` to see where this warning was
## generated.
```

```
## `summarise()` has grouped output by 'date'. You can override using the
## `.groups` argument.
```

```
## # A tibble: 20 × 2
## # Groups:   date [20]
##    date       mean_sentiment
##    <date>              <dbl>
##  1 2023-08-01        -0.0616
##  2 2023-08-02         0.136
##  3 2023-08-03         0.107
##  4 2023-08-04        -0.0510
##  5 2023-08-05         0.193
##  6 2023-08-06        -0.0144
##  7 2023-08-07         0.0364
##  8 2023-08-08         0.0666
##  9 2023-08-09         0.0997
## 10 2023-08-10        -0.0254
## 11 2023-08-11        -0.0340
## 12 2023-08-12         0.0668
## 13 2023-08-13        -0.0604
## 14 2023-08-14        -0.0692
## 15 2023-08-15         0.0617
## 16 2023-08-16        -0.0220
## 17 2023-08-17        -0.0191
## 18 2023-08-18        -0.0760
## 19 2023-08-19         0.0551
## 20 2023-08-20         0.0608
```

Question-9: Selective Sentiments

Use the filter and select commands to extract messages with a negative sentiment score (less than 0) and create a new dataframe.

Solution:

```
# Enter code here
comm_data. %>%
  filter(sentiment<0)%>%
    select(message,sentiment)
```

```
## # A tibble: 487 × 2
##    message         sentiment
##    <chr>               <dbl>
##  1 Hello everyone!    -0.143
##  2 Need assistance    -0.108
##  3 Hello everyone!    -0.741
##  4 Hello everyone!    -0.188
##  5 Hello everyone!    -0.933
##  6 Need assistance    -0.879
##  7 Great work!        -0.752
##  8 Team meeting       -0.787
##  9 Fun weekend!       -0.539
## 10 Exciting news!     -0.142
## # ℹ 477 more rows
```

Question-10: Enhancing Engagement

Apply the mutate command to add a new column to the “comm_data” dataframe, representing a sentiment label: “Positive,” “Neutral,” or “Negative,” based on the sentiment score.

Solution:

```
# Enter code here
comm_data.%>%
  mutate(sentiment_label = ifelse(sentiment>0, "Positive",
                                  ifelse(sentiment<0, "Negative", "Neutral"))) %>%
  select(sentiment, sentiment_label)
```

```
## # A tibble: 1,000 × 2
##    sentiment sentiment_label
##        <dbl> <chr>
##  1     0.824 Positive
##  2     0.662 Positive
##  3    -0.143 Negative
##  4     0.380 Positive
##  5     0.188 Positive
##  6    -0.108 Negative
##  7    -0.741 Negative
##  8    -0.188 Negative
##  9     0.618 Positive
## 10    -0.933 Negative
## # ℹ 990 more rows
```

Question-11: Message Impact

Create a new dataframe using the mutate and arrange commands that calculates the product of the sentiment score and the length of each message. Arrange the results in descending order.

Solution:

```
# Enter code here
comm_data.%>%
  mutate(new = sentiment*nchar(message)) %>%
    arrange(desc(new))
```

```
## # A tibble: 1,000 × 6
##    date       channel sender       message         sentiment   new
##    <date>     <chr>   <chr>        <chr>               <dbl> <dbl>
##  1 2023-08-16 Email   @frank_chat  Hello everyone!     0.998  15.0
##  2 2023-08-14 Slack   @erin_tweets Hello everyone!     0.988  14.8
##  3 2023-08-18 Email   dave@example Hello everyone!     0.978  14.7
##  4 2023-08-17 Email   dave@example Hello everyone!     0.977  14.7
##  5 2023-08-07 Slack   carol_slack  Hello everyone!     0.973  14.6
##  6 2023-08-06 Slack   dave@example Hello everyone!     0.968  14.5
##  7 2023-08-08 Slack   @frank_chat  Need assistance     0.964  14.5
##  8 2023-08-09 Email   @erin_tweets Need assistance     0.953  14.3
##  9 2023-08-17 Twitter @frank_chat  Hello everyone!     0.952  14.3
## 10 2023-08-12 Email   carol_slack  Need assistance     0.938  14.1
## # ℹ 990 more rows
```

Question-12: Daily Message Challenge

Use the group_by, summarise, and arrange commands to find the day with the highest total number of characters sent across all messages in the “comm_data” dataframe.

Solution:

```
# Enter code here
comm_data. %>%
    group_by(date)%>%
      summarise(date, all_char = sum(nchar(message)))%>%
      distinct(date, all_char)%>%
  arrange(desc(all_char))%>%
  ungroup()%>%
  slice(1)
```

```
## Warning: Returning more (or less) than 1 row per `summarise()` group was deprecated in
## dplyr 1.1.0.
## ℹ Please use `reframe()` instead.
## ℹ When switching from `summarise()` to `reframe()`, remember that `reframe()`
##   always returns an ungrouped data frame and adjust accordingly.
## Call `lifecycle::last_lifecycle_warnings()` to see where this warning was
## generated.
```

```
## `summarise()` has grouped output by 'date'. You can override using the
## `.groups` argument.
```

```
## # A tibble: 1 × 2
##   date       all_char
##   <date>        <int>
## 1 2023-08-10      875
```

Question-13: Untidy data

Can you list at least two reasons why the dataset illustrated in slide 10 is non-tidy? How can it be made Tidy?

Solution: *There are multiple variables in the columns 2,3,4, and there are also observations in the columns which makes it more difficult to handle(filter etc.)In order to make it tidy i should make sure each variable must have its own column, each observation must have its own row and each value must have its own cell.*
